a Whole existing variant population

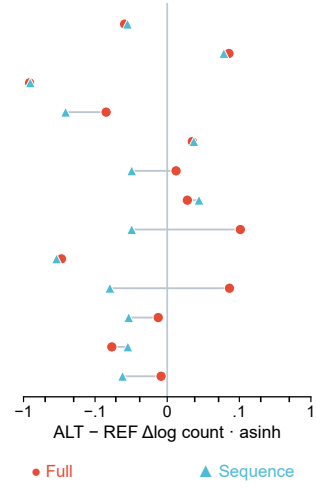

4,669 exact GRCh38 REF/ALT variants · 7,262 previously exposed ASB events

ClinVar	**520 exact matches**	P/LP3 · B/LB453 · VUS4 · conflicts7 · other1 · no germline class52
TCGA	**6 exact matches**	6 singleton case observations · 8-site union · 13 ASB events

ClinVar unmatched4,149; TCGA unmatched4,663. Successful absence in source is not biological absence.

b All disease-associated events

CV: aggregate P/LP, 2 stars. Cancer abbreviations: TCGA project; one case/site.

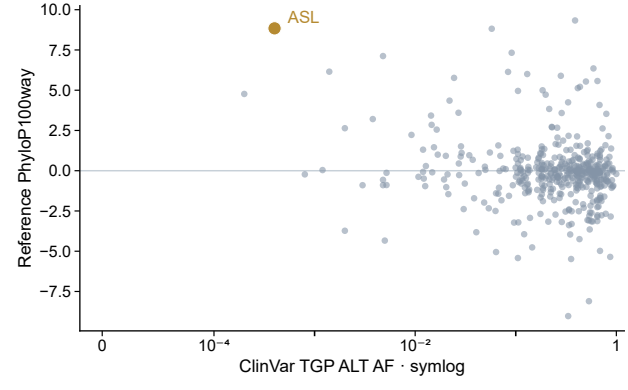

Source prefers REF all13 · Full7/13, Sequence10/13 · 11 training /2 validation

c Clinical class and reference conservation

d Population ALT frequency

428 available · missing AF remains unavailable

Clinical class and tumor occurrence annotate context; they do not validate a disease-specific RBP mechanism.
